

THE NEW WAY  
TO SUCCESS.  
CREATIVITY,  
INNOVATION,  
BUT ALSO  
KNOWLEDGE AND  
DEVELOPMENT

# The all new PROMASOFT With Endless Possibilities Technology

We always provide innovative and cost-effective software solutions that address your business goals and enhance productivity and performance

## About PromaSoft

### BUSINESS PHILOSOPHY

We-employees and management- strongly believe in honouring both our internal and external commitments. Our proactive value based ethics approach may be viewed in contrast to more reactive "compliance-based" ethics, which takes a legalistic approach to doing the right thing. Our approach results in a culture that expresses positive values and creates a climate that supports ethical and legal decision-making. We believe our first responsibility is to our customers. To meet their needs, our services must be of the highest quality and of reasonable price. We are also responsible to our employees, We encourage and support their empowerment.

Last but not least, we are responsible to our shareholders. We make investments in facilities, infrastructure, employees, and intellectual property to ensure that both shareholders and employees get a fair return on their investment in the long term.

## OUR FRAMEWORK

Oracle ADF is based on the model view controller design pattern that promotes loose coupling and easier application development and maintenance. Oracle ADF provides a solution for each of the MVC layers...

## ENTERPRISE AUTOMATION

The new competition and dynamic business environment pushes organizations and businesses to strive for highest levels of efficiencies by the use of new technology and services.

## SOFTWARE DEVELOPMENT

Promasoft Technology provide software Application Development & Maintenance (ADM) services to our clients globally. Our forte covers the broad spectrum of your business - whether building custom applications

## IT OUTSOURCING

The IT management needs has been a challenge for most non IT companies. Also, due to market pressures, availability of skilled staff which can develop a vision, and take long term decisions is also very limited

## IT CONSULTING

IT & IT Security Consulting is definitely our core competency and our prime business. We do have a large pool of talented and experienced consultants, Link to [popupwho](#) can cater their services to organizations of any size.

## CLOUD SERVICES

Promasoft technology have high-end Cloud Computing systems incorporate a multilayered ecosystem of IaaS "Infrastructure as a Service", PaaS "Platform as a Service", and SaaS "Software as a Service" with

The **TECHNOLOGY** we are using...

Application software developers also have to consider a lengthy array of screen sizes, hardware specifications and configurations because of intense competition in mobile software and changes within each of the platforms.

## APPLICATION DEVELOPMENT FRAMEWORK

Oracle ADF is an end-to-end development framework, built on top of the Enterprise Java platform, offering unparalleled productivity to application developers. The framework provides integrated infrastructure solutions for the various layers of the application and an easy way to develop on top of them.

## MICROSOFT .NET FRAMEWORK

NET is an integral part of many applications running on Windows and provides common functionality for those applications to run. The .NET Framework provides a comprehensive and consistent programming model for building applications that have visually stunning user experiences and seamless and secure communication.

## MICROSOFT SHAREPOINT

Connect with employees across the enterprise - use SharePoint to engage with people, share ideas and reinvent the way you work together & store all your documents and collaborate with colleagues in real time.

## JAVA DEVELOPMENT

Writing Java applets and applications needs development tools like Java Development. The Java Development Kit includes the Java Runtime Environment, the Java compiler and the Java APIs. It's easy for both new and experienced programmers to get started.

## SOFTWARE PRODUCT ENGINEERING

### Committed to delivering product innovation

*PromaSoft Technology helps design and develop high quality software products from concept to reality; quickly and cost-effectively to enhance competitive advantage.*

Committed to delivering product innovation, We provide Software Product Engineering services for customers across multiple domains and technology platforms.

We identify, develop, and deploy sustainable technology solutions based on existing and emerging technology trends. Our engineers and research staff continuously evaluate emerging technologies and products within Microsoft, J2EE, and Open Source to develop solution delivery accelerators and provide end-to-end solutions to our customers.

### Key benefits of our Software Product Engineering services:

- Rapid go-to-market.
- Incremental development/delivery model that engages customers through the project lifecycle.
- Use of best-of-breed technologies, frameworks, and accelerators.
- Ability to increase product effectiveness by incorporating market feedback

## BUSINESS PROCESS OUTSOURCING

### WE CAN OFFER YOU?

BPO is distinct from information technology (IT) outsourcing, which focuses on hiring a third-party company or service provider to do IT-related activities, such as application management and application development, data center operations, or testing and quality assurance.

### Benefits and limitations

The main advantage of BPO is the way in which it helps increase a company's flexibility. However, several sources have different ways in which they perceive organizational flexibility. In early 2000s BPO was all about cost efficiency, which allowed a certain level of flexibility at the time. Due to technological advances and changes in the industry (specifically the move to more service-based rather than product-based contracts), companies who choose to outsource their back-office increasingly look for time flexibility and direct quality control.

Most services provided by BPO vendors are offered on a fee-for-service basis, using business models such as Remote In-Sourcing or similar software development and outsourcing models. This can help a company to become more flexible by transforming fixed into variable costs.

## QUALITY ASSURANCE AND TESTING SERVICES

PromaSoft Technology offers distinguished QA services and solutions with comprehensive and reliable testing processes for its customers while adhering to the highest quality of testing standards.

Quality Assurance (QA) & Testing Service is a way of preventing mistakes or defects in manufactured products and avoiding problems when delivering solutions or services to customers. QA is applied to physical products in pre-production to verify what will be made meets specifications and requirements, and during manufacturing production runs by validating lot samples meet specified quality controls. QA is also applied to software to verify that features and functionality meet business objectives, and that code is relatively bug free prior to shipping or releasing new software products and versions.

### QA & Testing Solutions

Services to Envision and Transform QA

Services to Operate and Sustain QA

Services to Optimize QA

## APPLICATION DEVELOPMENT

### Fusion Web Application

Deploying a Fusion web application is slightly different from deploying a standard Java EE application. JSF applications that contain ADF Faces components

### iOS App

The iOS SDK extends the Xcode toolset to include the tools, compilers, and frameworks you need specifically for iOS development.

### Android App

Android is one of the fastest growing mobile platforms. It has been created by Google and Open Handset Alliance. The number of Android devices is in million rapidly.

### Windows App

Use a flat navigation pattern for your Windows Store app when it has a small number of pages and its information is not organized in a hierarchy.

### BlackBerry App

BlackBerry applications are widely popular in the mobile market. eNoah offers outstanding project models to help your current business

### Web Based App

Web application development is the process and practice of developing web applications. Web applications undergo the same unit, integration and system testing.

## APPLICATION DEVELOPMENT & MAINTENANCE

### APPLICATION DEVELOPMENT FRAMEWORK

Oracle ADF is based on the model view controller design pattern that promotes loose coupling and easier application development and maintenance. Oracle ADF provides a solution for each of the MVC layers and supports easy integration of the various layers together with integrated security and customization solution.

#### Benefits and Innovation

Oracle Application Development Framework (Oracle ADF) is an innovative, yet mature Java EE development framework available from Oracle and directly supported and enabled by the award winning development environment, Oracle JDeveloper 11g. Oracle ADF simplifies Java EE development by minimizing the need to write code that implements the application's infrastructure allowing the developers to focus on the features of the actual application. Oracle ADF provides these infrastructure implementations as part of the framework. To recognize a set of runtime services is not enough, Oracle ADF is also focused on the development experience to provide a visual and declarative approach to Java EE development through the Oracle JDeveloper 11g development tool.

## MICROSOFT .NET FRAMEWORK

### STUNNING USER EXPERIENCES

The .NET Framework is Microsoft's comprehensive and consistent programming model for building applications that have visually stunning user experiences, seamless and secure communication, and the ability to model a range of business processes.

includes a large class library known as Framework Class Library (FCL) and provides language interoperability (each language can use code written in other languages) across several programming languages. Programs written for .NET Framework execute in a software environment (as contrasted to hardware environment), known as Common Language Runtime (CLR), an application virtual machine that provides services such as security, memory management, and exception handling. FCL and CLR together constitute .NET Framework.

.NET is an integral part of many applications running on Windows and provides common functionality for those applications to run. This download is for people who need .NET to run an application on their computer. For developers, the .NET Framework provides a comprehensive and consistent programming model for building applications that have visually stunning user experiences and seamless and secure communication.

## WINDOWS SHAREPOINT SERVICES

### MICROSOFT SHAREPOINT

Microsoft SharePoint is a web application framework and platform developed by Microsoft. First launched in 2001, SharePoint integrates intranet, content management and document management, but recent versions have broader capabilities.

SharePoint Foundation is available for free on premises deployment—in previous versions it was called Windows SharePoint Services.

SharePoint comprises a multipurpose set of Web technologies backed by a common technical infrastructure. By default, SharePoint has a Microsoft Office-like interface, and it is closely integrated with the Office suite. The web tools are intended for non-technical users. SharePoint can provide intranet portals, document & file management, collaboration, social networks, extranets, websites, enterprise search, and business intelligence.[5] It also has system integration, process integration, and workflow automation capabilities.

## JAVA DEVELOPMENT ENVIRONMENT

### JAVA DEVELOPMENT SERVICES FOR EXCEPTIONAL SOLUTIONS

Java is a programming language originally developed by Sun Microsystems and released in 1995 as a core component of Sun Microsystems' Java platform. Java is a safe, robust, garbage-collected, object-oriented, high-performance, multi-threaded, interpreted, architecture-neutral, cross-platform, buzzword-compliant programming language.

#### Java Development Services

Our customers have relied on our understanding and expertise of Java technologies supported with a commitment to keeping up with the ever changing Java technology landscape. We help our clients choose the right Java architecture; following tried and tested approaches to build robust and scalable Java applications: Our Java development services can help you with:

- Java Web Development
- Java Application Development
- Java Software Development
- Enterprise Java Development
- Java Mobile Development
- Java Migration
- Custom Java Development
- Java Professional Services

## OUTSOURCING & CONSULTING

### OUTSOURCING TO REDUCE COSTS, IMPROVE QUALITY

*Outsourcing includes both foreign and domestic contracting, and sometimes includes offshoring or relocating a business function to another country. Financial savings from lower international labor rates is a big motivation for outsourcing/offshoring.*

Enterprises look to outsourcing to reduce costs, improve quality, reduce management effort and bring about transformational change but too often these benefits fail to materialise. PromaSoft helps its clients understand what suppliers really need to bring about these outcomes and, where they are viable, to implement successful and sustainable arrangement

The opposite of outsourcing is called insourcing, which entails

## CLOUD SERVICES

### CLOUD COMPUTING

Cloud computing is a term used to refer to a model of network computing where a program or application runs on a connected server or servers rather than on a local computing device such as a PC, tablet or smartphone.

Cloud computing has proven to be a boon for businesses—especially small businesses, for which it hits a particularly sweet spot. With cloud services, small businesses reap the benefits of not having to deploy physical infrastructure like file and e-mail servers, storage systems or shrink-wrapped software. Plus, the "anywhere, anytime" availability of these solutions, means hassle-free collaboration among business partners and employees using the ubiquitous browser. Cloud services also provide entrepreneurs, SOHOs, and mom-and-pop outfits access to sophisticated technology without the need of an IT consultant or tech worker on the payroll.
